APPENDIX A:.....	20

Introduction

This report is prepared for the Rhode Island General Assembly in conformance with the Permanent Noise Monitoring Act of 1998, as amended. It contains statistical information on aircraft operations, activity levels by aircraft types, and noise complaints for the Second Quarter, 2026. The Second Quarter is defined as operations from April through June of 2026.

Rhode Island T. F. Green International Airport is a small-hub commercial service airport located in Warwick, RI. It serves the Rhode Island, Southern Massachusetts and Eastern Connecticut communities.

The airport has two active runways, 5-23 and 16-34. Runway 5-23 is 8,700 feet long and 150 feet wide. It is oriented in a north/south direction and serves as the primary runway for most operations. Runway 16-34 is the “crosswind” runway oriented in a northwest/southeast1 direction. It is 6,081 feet long and 150 feet wide and used as weather conditions dictate.

Rhode Island T. F. Green International Airport was among the earliest airports in the country to participate in the Federal Aviation Administration’s Noise and Land Use Compatibility Program, commonly referred to as Part 150. Under the direction of the State of Rhode Island and now the RIAC, Rhode Island T. F. Green International Airport has had an active noise mitigation program since the early 1980s.

In 1998, RIAC undertook a complete update of the original Part 150 Study and recommended several new operations procedures designed to minimize noise impacts on surrounding communities. The center of these recommendations involved the implementation of noise abatement departure and arrival procedures for turbojet aircraft.

In June 2000, the FAA approved these new procedures and the local air traffic control tower implement the assigned departure headings in an effort to reduce the number of persons adversely affected by aircraft operations.

Permanent Noise Monitoring Act

In 1998, the Rhode Island Legislature enacted Title 1, Aeronautics, Chapter 1-5; Permanent Noise Monitoring Act – Aircraft Operations Monitoring System (AOMS). This Act required the RIAC to install an aircraft operations monitoring system, and collect and report a summary of the collected data on a quarterly basis. This document is generated to meet those requirements.

The AOMS previously relied on five (5) radar sensors deployed throughout the State of Rhode Island. The sensors were subject to repeated failures resulting in loss of data when one or more sensors were not fully operational. The sensors and data acquisition system have exceeded their expected service life. RIAC has updated the system by integrating multiple existing aircraft surveillance systems merged into a single data stream to improve reliability and accuracy of data. The data is archived for use in generating reports. Information collected includes; aircraft type, flight number, registration number, altitude, arrival/departure status and the origin or destination.

Passenger Activity

Airports use 2 criteria to measure activity; the number of operations and the number of passengers. This section discusses the passenger activity levels associated with aircraft operations at Rhode Island T. F Green International Airport in the Second Quarter of 2026.

Rhode Island T. F. Green International Airport served approximately 1,096,724 passengers during the Second Quarter of 2026. Figure 1 shows the number of passengers that have used the airport via scheduled air carriers, commuter and charter flights since 2024.

In 2020 through 2021 there was a downturn in passenger activity due to the travel impacts of the COVID-19 pandemic. Air travel has started to rebound, resulting in an uptick in passenger levels.

Figure 1: Total Passengers, by Quarter

Source: RIAC 2024 - 2026 Passenger Activity Report

Aircraft Operations

Aircraft operations can be classified in a number of ways including by type of aircraft, arrivals/departures, origin/destination, airline fleet, Part 36 (relative noisiness) and time of day.

To present the overall perspective of operations, Table 1, highlights the arrivals and departures of all aircraft by runway at Rhode Island T. F. Green International Airport.

In general aircraft must take off into the wind, therefore, aircraft also arrive into the wind to remain consistent with the traffic flow and avoid aircraft departing and arriving in the same direction.

As previously stated, there are 2 runways at Rhode Island T. F. Green International Airport, 5-23 and 16-34. Runways are given numbers based on the compass heading for each runway end. By designating each runway end, the Air Traffic Control Tower and pilots know which direction to land or depart. For example, Runway 5 has a compass heading of 050 degrees and is oriented to the north. Aircraft operating on this runway will depart to the north and arrive from the south. Conversely, Runway 23 has a heading of 230 degrees and is oriented to the south. Aircraft operating on Runway 23 will depart to the south and arrive from the north.

Total Operations

The Aircraft Operations Monitoring System (AOMS) collected **16,219** flight tracks for aircraft operations during this period. There were **8,731** departures and 7,488 arrivals for an average of 180 operations per day. Table 1 depicts aircraft operations by runway and operation type.¹

Table 1: Total AOMS Operations by Runway, 2nd Quarter 2026

Runway	Arrivals		Departures		Total	
	# of Ops	%	# of Ops	%	# of Ops	%
5	1795	24%	2259	26%	4054	25%
16	1147	15%	1134	13%	2281	14%
23	3028	40%	3783	43%	6811	42%
34	1518	20%	1555	18%	3073	19%
Total	7488	100%	8731	100%	16219	100%

¹ Detailed record of operations by aircraft type and time of day can be found on Rhode Island T.F. Green International Airport's website, www.flyri.com, listed under Quarterly Aircraft Operations Report, Runway Operations Data 2nd Quarter 2026.

Figure 2 depicts the runway use graphically over an aerial view of the airport.

Figure 2: Aerial View of Total Operations, by Runway End, 2nd Quarter, 2026

Source: RIAC, Airline Activity Reports and Aircraft Operations Monitoring System 2026

The balance of this report will focus on the scheduled commercial aircraft and cargo operations.

Part 36 Certification

During the Second Quarter of 2026 there were 6,639 total departures of jet aircraft from Rhode Island T. F. Green International Airport, which is approximately 73 operations per day. The overall percentage of Stage 3 aircraft departing Rhode Island T. F. Green International Airport was at 48%, and the percentage of Stage 4 aircraft was 45%. Stage 5 aircraft accounted for about 1% of total jet operations during the same period.

Late Night Operations (Midnight – 6:00 a.m.)

Late Night Operations are defined by the voluntary nighttime curfew of midnight to 6:00 AM. Only 9 Late Night Operations occurred during the 2nd Quarter of 2026. They all were early morning departures occurring between 5:00 a.m. and 5:59 a.m. and were operated by American Airlines. as shown in Figure 4.

RIAC has implemented a voluntary nighttime curfew for operations between midnight and 6:00 a.m.

Part 150 Noise Abatement Corridor Compliance

The original Part 150 Study and Noise Exposure Maps (NEM) were approved by the FAA for Rhode Island T. F. Green International Airport in 1986. The NEM has been updated several times, most recently in 2010 as part of the Environmental Impact Statement for the Airport Improvement Program (AIP) approved in the Record of Decision (ROD) issued in November of 2011.

RIAC implemented the use of noise abatement corridors beginning in June 2001. There are a total of eight corridors, comprised of at least one departure corridor per runway and one arrival corridor for Runway 34.

For all but one runway end, there are two flight tracks that jet aircraft may follow. The Air Traffic Control Tower issues a departure heading associated with one of the Part 150 corridors based on the aircraft's destination. It should be noted that pilots will proceed on their departure heading when deemed safe to do so, depending on several variable factors (i.e., type of aircraft, winds, weather, etc.). A description of these flight corridors is presented below and a graphical depiction of the corridors is shown in Figures 7 and 8.

Figure 7 : Part 150 Noise Abatement Departure Corridors

Source: FAA, EIS for T. F. Green Air Traffic Control Noise Abatement Procedures, 2000. FAA approved Noise Abatement Measures 2000.

Figure 8 : Part 150 Noise Abatement Arrivals Corridor

Source: FAA, EIS for T. F. Green Air Traffic Control Noise Abatement Procedures, 2000. FAA approved Noise Abatement Measures 2000.

Runway 5:

Northbound Departures (D5NA): Jet aircraft will turn left as soon as practicable after passing runway end to fly a 360-degree heading until reaching 3 DME (Distance Measuring Equipment).

Southbound Departures (D5SB): Jet aircraft will turn right to a 080-degree heading until reaching 3 DME, passing over Passeonkquis Cove, Gaspee Point Beach and Narragansett Bay.

Runway 23:

Northbound Departures (D2NA): Jet aircraft will turn right as soon as practicable after passing runway end to a 280-degree heading until reaching 3 DME. This measure is intended to direct departures under 3,000' over compatible land use areas in Apponaug along I-95 and SR 117.

Southbound Departures (D2SA): Jet aircraft will turn left as soon as practicable after passing runway end to a 160-degree heading until reaching 5 DME or intercepting the 180-degree radial. This measure is intended to route traffic over Greenwich Bay and along the north edge of Goddard Memorial State Park.

Runway 16:

Southbound Departures (D1SA): Jet aircraft will turn right to a 180-degree heading until reaching 3 DME or intercepting the PVD VORTAC 180-degree radial. This measure is intended to direct departures over compatible land use areas along Brush Neck Cove and Greenwich Bay.

Runway 34:

Northbound Departures (D3NA): Jet aircraft will turn left as soon as practicable after passing runway end to a 330-degree heading until reaching 4 DME. This measure is intended to direct departures along compatible land use areas located along SR37 and I-295.

Southbound Departures (D3SA): Jet aircraft will turn right to a 360-degree heading until reaching 3 DME. This measure is intended to direct departures along compatible land use areas along I-95 and the Pawtuxet River corridors.

Runway 34:

Arrivals (A3SA): Jet aircraft will intercept the final approach course before crossing the shoreline at Rocky Point Beach on Warwick Neck (4 DME from the PVD VORTAC). This measure is intended to keep jet aircraft following the same course along the extended runway centerline from beyond the shoreline.

Quarterly Operations Report
2nd Quarter 2026

An analysis of each air carrier and their compliance with these departure corridors was conducted using the Aircraft Operations Monitoring System. As shown on Table 3, the overall compliance with noise corridors by the air carriers is 86%. Overall cargo carrier compliance in maintaining the aircraft's departure flight track within the corridors is 86%.

Noise Complaints

RIAC has instituted several methods for citizens concerned about aircraft noise to voice their opinions. RIAC is committed to minimizing the effects of aircraft generated noise on the Warwick and Cranston Communities through the use of operational procedures and noise mitigation programs. Citizens can call the noise hotline and leave a message or submit a complaint via the web page.

Figure 9: Noise Complaints via Web Page

Source: RIAC Noise Hotline & Website/Email Portal 2025 - 2026

As seen in Figure 9, during the Second Quarter 2026, RIAC received no complaints from citizens via the web page.
